

Microsoft 365

## Data protection and control over the disclosure of corporate information

### ⚠️ Challenge:

- Control and protect confidential documents and monitor their use regardless of their storage location
- Enable secure and convenient document sharing inside and beyond the company
- Minimize risk of loss or disclosure of sensitive information

### 👍 Solution:

- Protection of confidential documents against accidental leak or deliberate disclosure
- Content based classification of documents, application of corresponding security and encryption policies
- Detection of disclosure of sensitive documents on cloud services

### Benefits:

- Protection of sensitive information from unauthorized access
- Reduced risk of leakage of confidential data
- Secure internal and external document interchange
- Compliance to the legislative requirements (FZ No. 152, GDPR)

### Scenarios

- No tools for automatic document classification
- Non-existing document encryption and protection
- Not protected document transfer
- No system for monitoring and analysis of employee visits to cloud services to detect publication of documents on third-party cloud services

### Solution capabilities

- Document encryption aligned to content based automatic document classification
- Security policies for email, access and privilege management for messages and attachments
- Monitor documents stored on external cloud services and revoke access rights if needed
- Prevention of accidental transfer of unencrypted confidential data

### Tech and products

- Azure Information Protection
- Azure Rights Management Service
- Cloud App Security
